

TruEarthGreen LED has evolved over the years from a diverse mechanical design, manufacturing and service company into a complete LED solutions provider. We have 14 years of experience in product development, manufacturing, production and R&D and we've worked with all types of customers, from individual homeowners to Fortune 500 companies. Our company offers standard lighting components (spinning, hydro forming and lens injection molding and LED components) to meet any commercial or residential need. TruEarthGreen delivers a rapid ROI, high-quality products backed by up with warranty, immediate energy savings, and true retrofit solutions and stands alone in its commitment to quality and its ability to accommodate existing infrastructure. We make the transition from traditional lighting to LEDs simple and cost-effective for any client.

TruEarthGreen offers a wide product range of LED lighting products and components for both commercial and residential applications. Our LED lighting components both customer to your design and/or off the shelf range from LED tube lights, LED high power bulbs and spotlights, LED household lights, LED PAR/Flood lights, LED flexible strips and LED Modules. Our LED and standard lighting components along with our engineered solutions are maintaining existing infrastructure to make the transition from fluorescents or incandescent to LED lighting simple and cost effective. TruEarthGreen systems authentication and continues to strive for constant improvement in innovation and quality.
